PROJECTS

- SpreeWise – Full Stack Expense Management Platform** | [GitHub](#) | [Live](#) May 2026 – June 2026
Tech: React.js, TypeScript, Django REST Framework, PostgreSQL, JWT Authentication, Vite, Railway, Vercel
- Engineered a full-stack expense management platform with secure JWT authentication, role-based access control, and RESTful APIs for group management, expense tracking, and settlement workflows.
 - Implemented modular backend services for expense splitting, balance calculation, CSV-based expense import with validation, and optimized PostgreSQL data models to ensure accurate financial computations.
 - Built a responsive React frontend using reusable TypeScript components, integrated backend APIs with Axios, and deployed the application on Railway and Vercel with production-ready environment configuration.
- Local Vendor E-Commerce Platform – Online Dry Fruits Store** | [GitHub](#) | [Live](#) Sept 2025 – Oct 2025
Tech: React.js, Node.js, Express.js, MongoDB, Tailwind CSS, Stripe, Vercel
- Architected a full-stack MERN e-commerce app with JWT-based authentication and RBAC for 3 user roles (Admin, Customer, Guest), implementing end-to-end order management with Stripe payments and Cash-on-Delivery via REST APIs.
 - Built a secure admin dashboard with real-time inventory management, CRUD operations on products, and live order-status updates; integrated ChatGPT API for AI-powered product recommendations and automated customer query handling.
 - Deployed to production on Vercel with environment-based configuration; applied frontend performance optimizations achieving improved page-load times and seamless cross-device user experience.

EXPERIENCE / TRAINING

- Data Structures and Algorithms | Programming Pathshala** | [Certificate](#) Jun 2025 – Jul 2025
- Completed 120+ hours of intensive DSA training covering arrays, linked lists, stacks, queues, trees, graphs, heaps, hashing, and recursion; applied systematic debugging and root cause analysis throughout.
 - Implemented and optimized algorithms for searching, sorting, dynamic programming, graph traversal, and string manipulation; consistently applied Big-O time and space complexity analysis to evaluate solution performance.
 - Practised end-to-end coding workflows including version control with Git, test-case design for edge cases, and competitive-programming-style problem solving, enabling independent development of efficient algorithmic solutions.
